Understanding Your DSLR

Project - Fast Shutter Speed

You will need to submit two images for this project

We are looking for images that show good use of a fast shutter speed to freeze movement. Try to consider all of the three elements that result in a good image:

- Your images should be technically correct, meaning they should show correct use of the shutter speed, be correctly focused, well exposed, have the correct white balance and not be too noisy.
- They should be well composed and interesting to look at, ask yourself “Would I be happy to hang this on the wall?” Are the images taken in the best lighting conditions? Is the background too busy?
- Try to include an element of emotion, show your image to someone and see if they say WOW!
